Professional Summary

AI-first Software Engineer with 3+ years of experience building and shipping production features across frontend, backend, and API-driven systems. Strong foundation in data structures, scalable system design, and cloud-based development. Known for high ownership, rapid experimentation, and leveraging AI tools to accelerate development, improve code quality, and reduce technical debt. Passionate about building maintainable systems that scale in fast-moving product environments.

Education

Master of Science in Information Systems

Aug 2024 – Dec 2025

Central Michigan University

Bachelor of Technology in Information Technology

2019 – 2023

Keshav Memorial Institute of Technology

Technical Skills

Languages: Python, TypeScript, Java, Go, C#

Frontend: React, Next.js, JavaScript, HTML, CSS

Backend & APIs: REST APIs, GraphQL, System Integrations

Databases: PostgreSQL, MySQL

AI-Assisted Development: Copilot, Claude-style LLMs for code generation, debugging, test creation

Tools: Git, CI/CD, Cloud Fundamentals, Automation, Agile

Professional Experience

Software Engineer, Strike Stock AI

Jun 2025 – Present

- Shipped production features across frontend and backend using React, TypeScript, Go, and GraphQL in a fast-paced product environment.
- Used AI tools to accelerate feature development, refactor code, and debug complex logic, reducing development time by approximately 30%.
- Collaborated with product and design teams to convert ambiguous requirements into working solutions through rapid prototyping and iteration.
- Improved developer efficiency by introducing automation and reusable components across the codebase.

Software Engineer I, Ivanti

Jan 2023 – Jul 2024

- Built and maintained enterprise-grade applications using C#, TypeScript, and RESTful APIs supporting thousands of users.
- Developed scalable backend services and database-driven features, improving system reliability and performance.
- Leveraged AI-assisted tools for code review, test generation, and troubleshooting production issues.
- Took ownership of features end-to-end, from design through deployment and post-release support.

Software Developer, eFlair

Jun 2020 – Jan 2023

- Developed full-stack applications using React, Java, and PostgreSQL with a focus on performance and maintainability.
- Designed APIs and database schemas to support scalable marketplace and dashboard features.
- Iterated quickly based on user feedback, improving usability and reducing feature turnaround time.

Projects

AI-Assisted Marketplace Platform | React, TypeScript, Go, GraphQL

- Built end-to-end marketplace features while using AI tools for code generation, refactoring, and test creation.
- Reduced technical debt by standardizing patterns and improving code readability across services.

Developer Productivity Automation

- Experimented with AI-driven workflows to automate repetitive development tasks, improving team velocity and consistency.

AI-Powered Recruiting Voice Agent | Python, LLMs, TypeScript

- Built an **LLM-driven voice agent** with real-time decision logic, session management, and AI-assisted responses, reducing repetitive tasks by 40%.

MedAI Diagnosis Platform | Python, AI Services, React, TypeScript

- Integrated structured and unstructured healthcare data with AI services to build a **decision-support system** with 95% data processing reliability.
